WHAT IS MEDICAL ABORTION?

- Medical Abortion is also known as self-managed abortion, it is safe and effective way of terminating unwanted pregnancy. In this term termination is done with the help of pills.
- Unwanted pregnancy can be treated with surgery and with medicines. The treatment is done with pills and no need of surgery is required and no risk is involved.
- In Abortion Kit, Misoprostol and Mifepristone pills are present as an active element which ensures guaranteed results of termination.
- These medicines are also available as Mifegest kit, Mifeprex kit, and Abortion Pill.
- [Order MTP kit online](#) to terminate unwanted pregnancy at home

How Does Abortion Kit Works?

Women who are under 9 weeks pregnant can take termination pills online. Mifepristone blocks the effects of progesterone, a natural female hormone that is needed for the pregnancy to sustain. Without this hormone, the lining of the uterus breaks down as it does during a menstrual period and stops the growth of the pregnancy. Mifepristone contracts the uterus and pushes out the pregnancy, which also causes bleeding and cramps. Misoprostol softens the cervix and contracts the uterus to expel the pregnancy. It is usually taken orally and Misoprostol is inserted vaginally.

All About Pregnancy Termination Pill!

Medical abortion does not have any long-term effect on women's health or fertility. Most women will ovulate within two or three weeks and will restart menstruation within four to five weeks after the abortion. Thus, a woman can become pregnant within weeks of having a medicine abortion and immediate use of an effective family planning method is recommended.
