Disclaimers: Before you attempt to fix the Microsoft office issue, we highly recommend taking a registry backup and set a system to restore point. Because this process involves repair on registry and changes. In case if something goes wrong during this process, we can revert back the settings and we can do a system restore? Also, save your documents, emails, spreadsheets, and office related files and back it up.

(In case if you not sure how to back up, consult the Experts to help you)

Solutions for Error Code 30029-4 :

Office programs will not open at all and give you an error code 1058-4. Even you get a different [error code 30029-4](#) when you try to repair or uninstall. This is found on Windows 8.1 to 10 machines recently.

First, do a disc clean up so that we can remove old-Microsoft office installation traces from your computer.

## How to do disc-cleanup:-

### Method-1 Creating shortcut

1. Right click on your computer home screen, Go to “new” in the list and select “Shortcut”.
2. After clicking on a shortcut, a command prompt window will open and type the command “cleanmgr.exe” in it and name as you like to remember it as a disc clean up shortcut button.
