

Rear Axle Shafts

[Rear Axle Shafts](#) are critical components in vehicle drivetrain systems, transferring torque from the differential to the wheels. Talbros Engineering is a leading manufacturer of high-quality rear axle shafts, serving diverse segments such as passenger vehicles, commercial vehicles, tractors, and off-road machinery. The company produces semi-float and full-float axle shafts with advanced forging, machining, and heat-treatment techniques to ensure durability and precision. Talbros also integrates robust quality controls, including ultrasonic and hardness testing, meeting stringent OEM standards. With a capacity of 3 million units annually, Talbros emphasizes innovation, sustainability, and global reliability in its axle shaft manufacturing.
